### Track and Report Information Using Mobile Technology

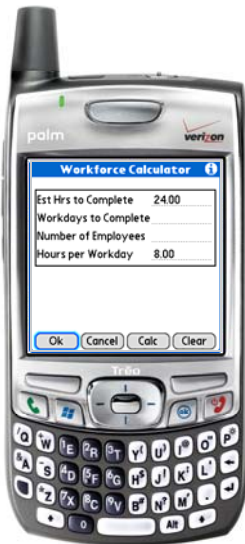

**ALTrac™**

*Production Tracking*

ALTrac allows for job production activity to be recorded electronically on mobile devices. It gives the field user the ability to record hours, units, and percent complete for labor, equipment, sub contractors, and materials used. It integrates with any construction accounting and/or project management software to allow importing estimates and actuals. Not only can field users record production unit information easily, but they also have access to accurate, up to date, fully consolidated information. The information recorded can be sent wirelessly from the field to the main office. Reports can then be viewed that would otherwise take days or weeks to compile. ALTrac eliminates paperwork and provides an accurate, efficient, and streamline environment for tracking and reporting production.

ALTrac utilizes Microsoft® Windows, Palm Computing® and Windows Mobile® operating systems. Find out more at:

### Key Features

- Data entry by description or code
- Flexible editing of what can be tracked
- Multiple entries per day
- Track job site conditions
- Record job diary notes
- Easy actual/estimate comparisons
- Quick over/under budget reading
- Copy of prior entry's activity
- Specify reporting requirements by job
- Easy adaptation of custom reporting
- Summary and detail production reporting
- Handheld no-touch deployment
- Record level data sync transfers
- Built with Microsoft® SQL/MSDE
- Construction accounting integration
- Pick list boxes display width of screen
- Real-time validity checks
- Real-time filtering
- Real-time searches
- Ease of use
