

Handheld Technology

Going Wireless

Eliminating Conventional Methods of Tracking Information

ALmedSRV™

- ALmedSRV is a service event tracking application for nursing personnel. It is designed to track information quickly and cost-effectively for health care agencies.
- This application enforces business rules remotely and integrates into billing systems. Our XML and data linking capabilities allow ALmedSRV to connect to any billing software offering one point of entry. This business application is tailored to ease the burden and reduce the costs of tracking and costing service events at all levels of an organization.

- ALmedSRV utilizes Palm OS smartphone technology and leverage the VerizonWireless data network. Find out more at:
