

The Company

• Full Turn-Key Solution Provider

• Austin Lane extends the reach of corporate networks to Personal Digital Assistants (PDAs), which include products like Palm Computing® connected organizers and Microsoft® Pocket PC-compatible handhelds. We recognize the need for enterprise-wide information management solutions for handheld devices. Therefore, we offer "enterprise-to-go" solutions which simplify the process of internal communications within a company. Our objective is to develop and implement superior solutions that operate on handheld devices which are competitive, innovative, profitable and easily supportable.

• PDAs have unfolded a whole new dynamic dimension to the computing industry. Austin Lane has the personnel with experience and knowledge to tap into this emerging technology. We incorporate over 20 years of technical knowledge and industry experience working with fully integrated multi-vertical software applications. Our vertical market experience with information management solutions includes industries such as commercial construction, commercial and residential property management, home building, hospitality, and medical systems.

• Our varied experience provides us with the ability to fully understand client needs. We create high-quality, customer-driven products with object-oriented system development tools. This combination of "real world" vertical experience leveraged with current technology allows us to effectively develop and implement solutions that are successful. The end result offers clients a competitive advantage by decreasing operating costs and eliminating conventional methods of tracking information.

• Austin Lane offers "smart money" solutions that enable companies to better equip their personnel to be more productive. We are in the business of facilitating companies with leading edge technology that produces positive results for all levels of the organization.
